

## CP3402 – Team 6 (Proof for coding and localhost browser view)

### First Version of the Assignment 2

For this version, our team generally tested out the connection between php functions.

### Header.php

This php file is for heading (navigation).

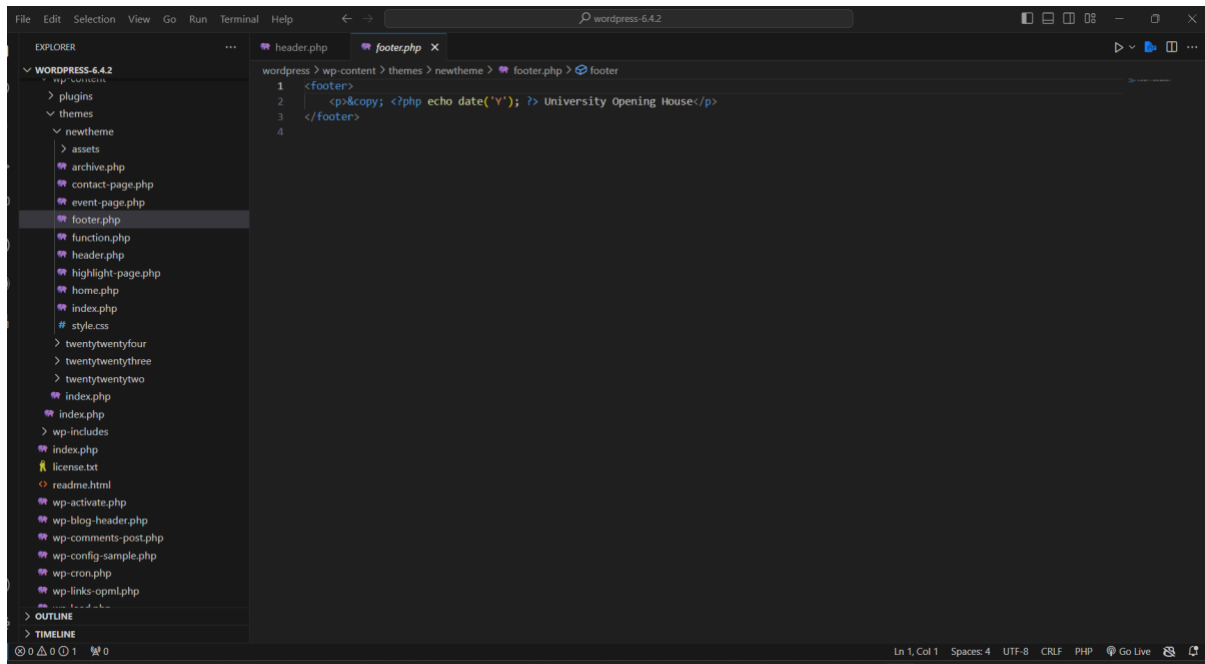

The screenshot shows a code editor with a dark theme. On the left is the 'EXPLORER' sidebar showing the file structure of a WordPress installation. The 'newtheme' directory is expanded, showing files like 'archive.php', 'contact-page.php', 'event-page.php', 'footer.php', 'function.php', 'header.php' (which is selected), 'highlight-page.php', 'home.php', 'index.php', 'style.css', and several 'twenty' series directories. The main editor area shows the content of 'header.php'. The code defines a navigation menu with links to Home, Events, Highlights, and Contacts, using PHP functions like 'esc\_url' and 'get\_permalink' for security and dynamic linking. A comment indicates where to add more links.

```
1 <header>
2   <nav>
3     <ul>
4       <li><a href="php echo esc_url(home_url('/')); ?">Home</a></li>
5       <li><a href="php echo esc_url(get_permalink(get_page_by_title('Events')-&gt;ID)); ?">Events</a></li>
6       <li><a href="php echo esc_url(home_url('/highlight-page.php')); ?">Highlights</a></li>
7       <li><a href="php echo esc_url(home_url('/contact-page.php')); ?">Contacts</a></li>
8       <li><a href="php echo esc_url(get_template_directory_uri() . '/contact-page.php'); ?">Custom Page</a></li>
9       <!-- Add more links as needed -->
10    </ul>
11  </nav>
12 </header>
13
```

## Footer.php

This php file is for footer part. It determines the style of footer.

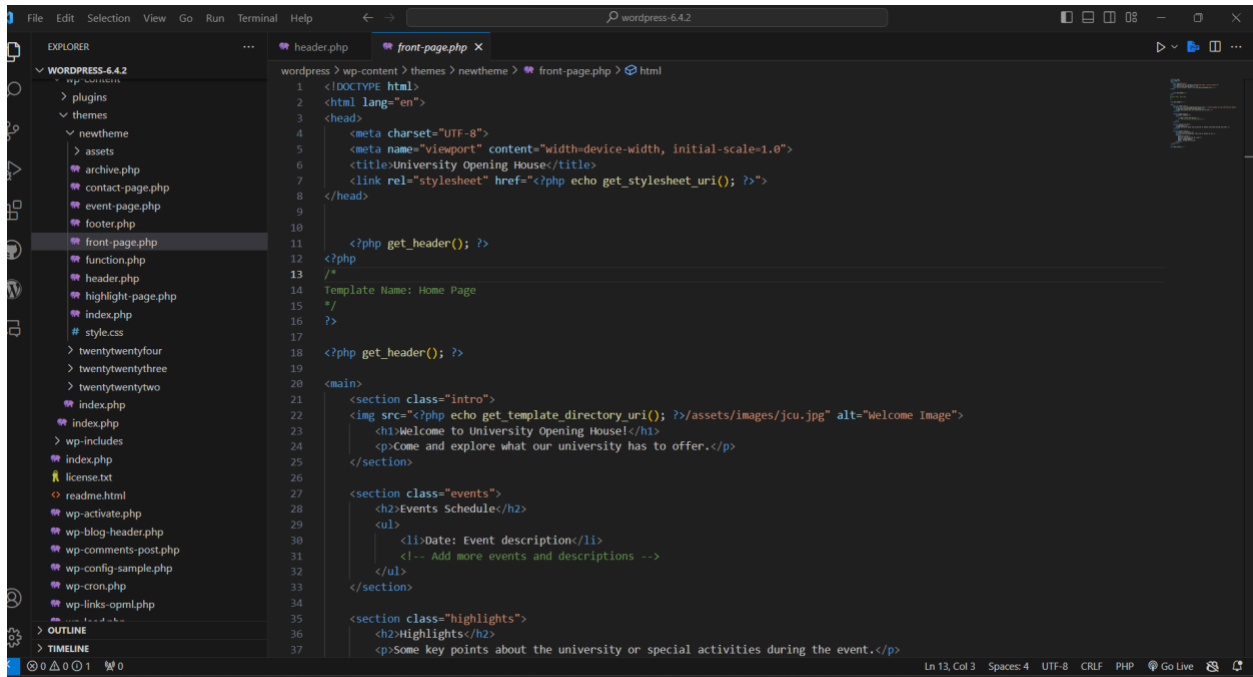

The screenshot shows a code editor with the Explorer panel on the left displaying the file structure of a WordPress theme. The 'footer.php' file is selected. The main editor area shows the content of 'footer.php' with the following code:

```
1 <footer>
2 | <p>&copy; <?php echo date('Y'); ?> University Opening House</p>
3 </footer>
4
```

The status bar at the bottom indicates 'Ln 1, Col 1', 'Spaces: 4', 'UTF-8', 'CRLF', 'PHP', and 'Go Live'.

## Front-page.php

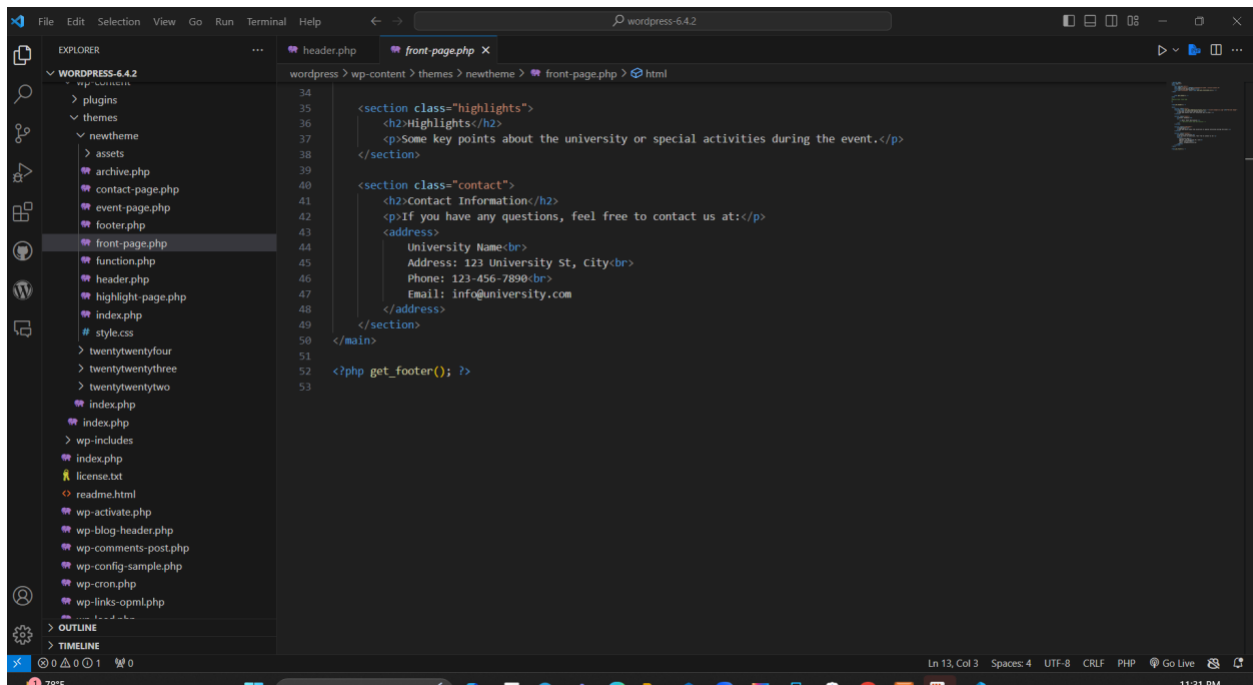

This php file shows the style of our website that will pop up first after opening localhost.

The screenshot shows a code editor with the Explorer panel on the left displaying the file structure of a WordPress theme. The 'front-page.php' file is selected. The main editor area shows the content of 'front-page.php' with the following code:

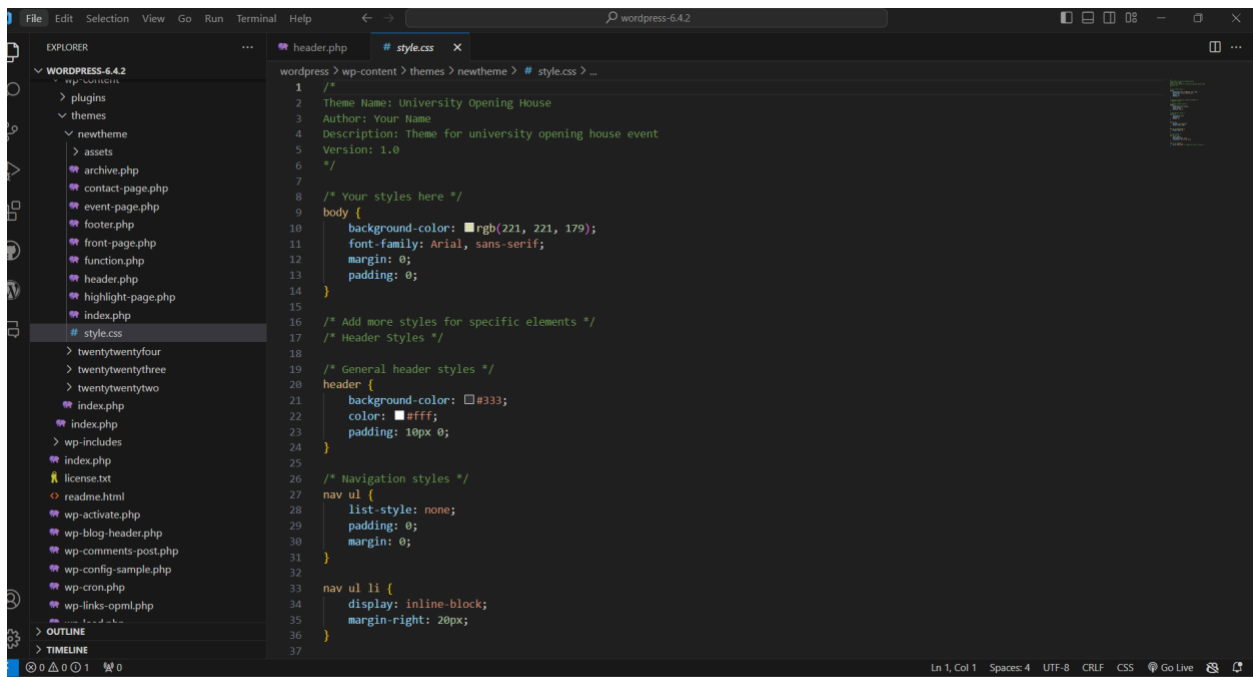

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4 | <meta charset="UTF-8">
5 | <meta name="viewport" content="width=device-width, initial-scale=1.0">
6 | <title>University Opening House</title>
7 | <link rel="stylesheet" href="<?php echo get_stylesheet_uri(); ?>">
8 </head>
9
10
11 <?php get_header(); ?>
12 <?php
13 /*
14 Template Name: Home Page
15 */
16 ?>
17
18 <?php get_header(); ?>
19
20 <main>
21 | <section class="intro">
22 | | 
23 | | <h1>Welcome to University Opening House</h1>
24 | | <p>Come and explore what our university has to offer.</p>
25 | </section>
26
27 | <section class="events">
28 | | <h2>Events Schedule</h2>
29 | | <ul>
30 | | | <li>Date: Event description</li>
31 | | | <!-- Add more events and descriptions -->
32 | | </ul>
33 | </section>
34
35 | <section class="highlights">
36 | | <h2>Highlights</h2>
37 | | <p>Some key points about the university or special activities during the event.</p>
```

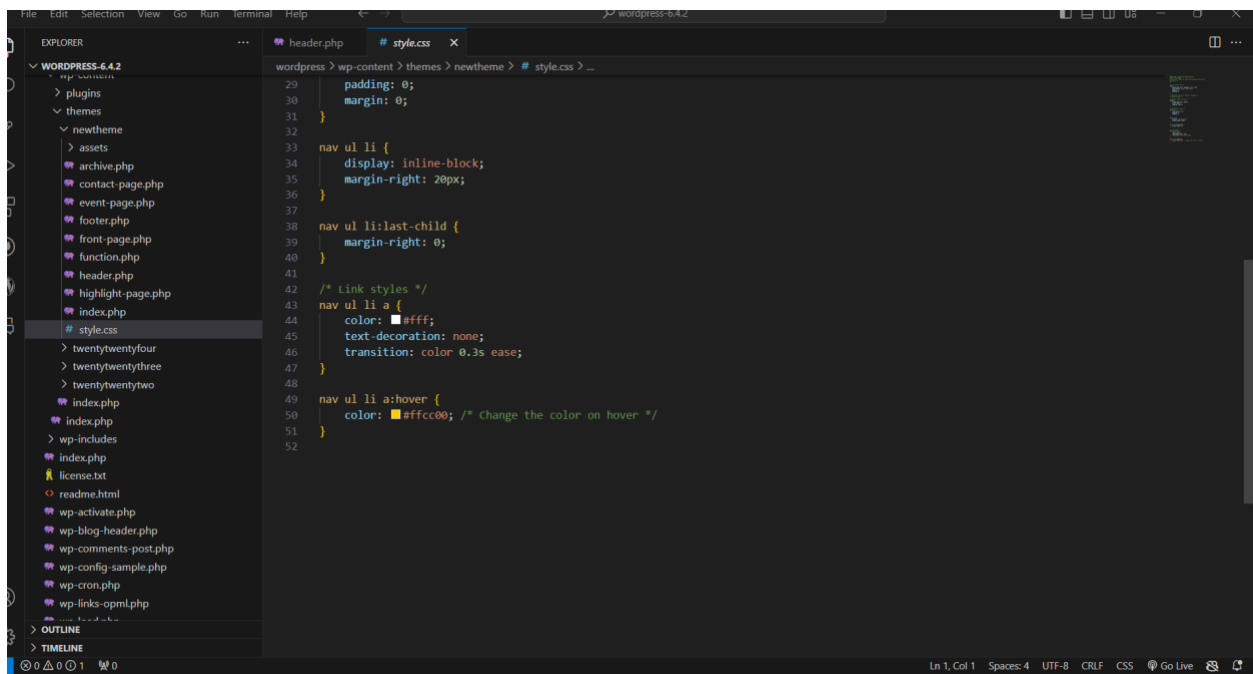

The status bar at the bottom indicates 'Ln 13, Col 3', 'Spaces: 4', 'UTF-8', 'CRLF', 'PHP', and 'Go Live'.

## Style.css

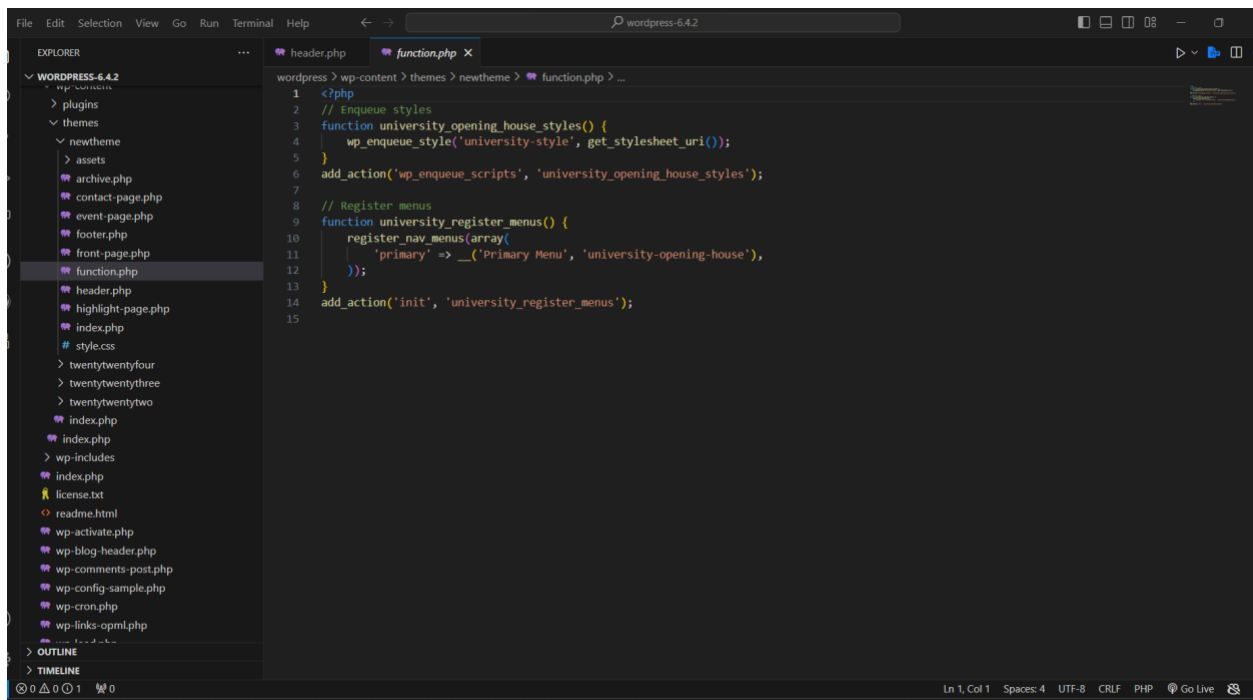

This file determines the style of our website.

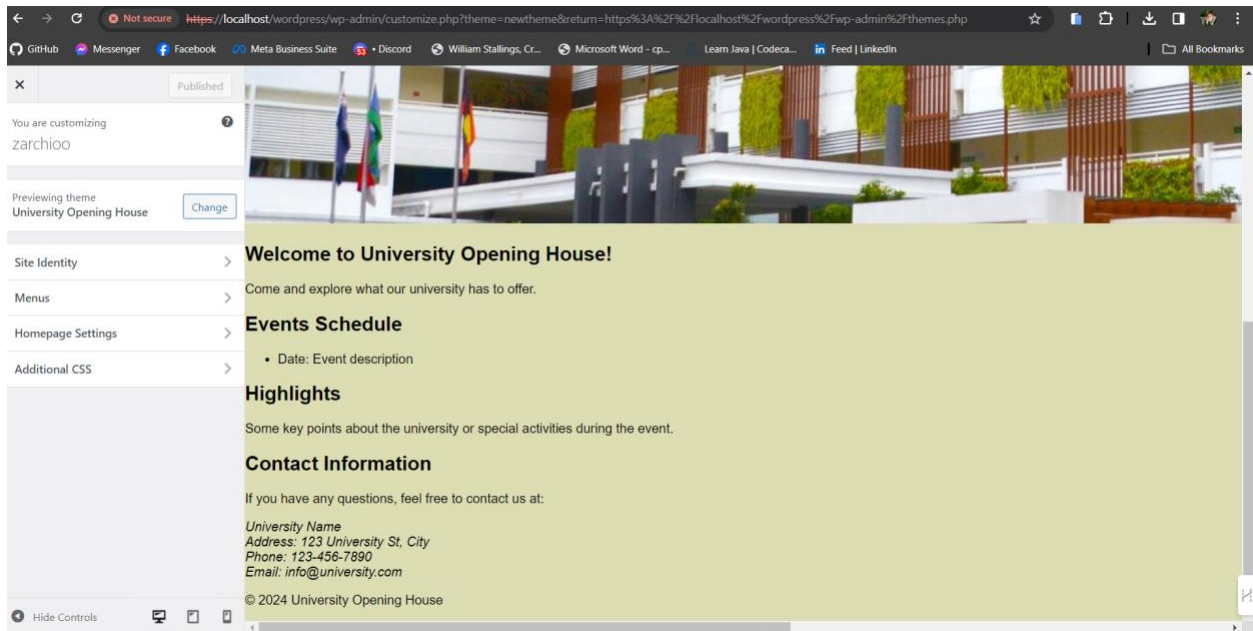

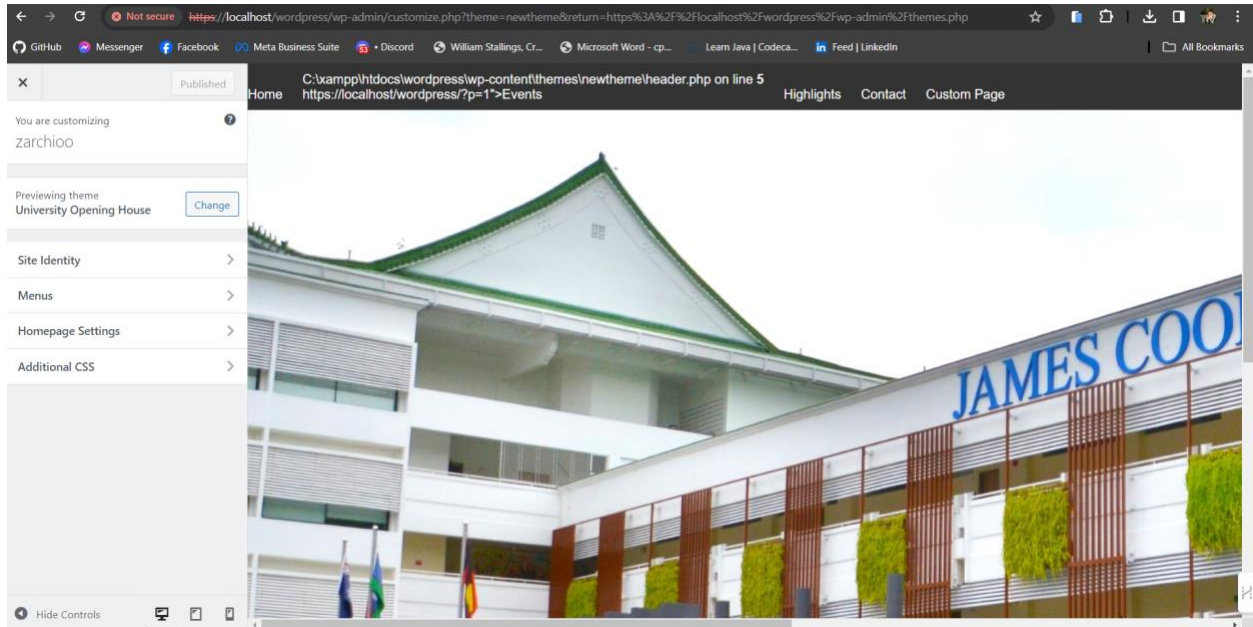

## Function.php

This function.php file displays the connection between functions.

## View site

## View page source
