

## CP3402 – Team 6 (Proof for coding and localhost browser view)

### Second Version of the Assignment 2

For this version, we significantly improved our first version of the website. This version (version 2) is similar and very close to the final version (version 3 of assignment 3). Considering the feedback from practical 7, we tried to add php decisions and repetitions. However, those functions of php are not needed for constructing our website.

### Navbar.php

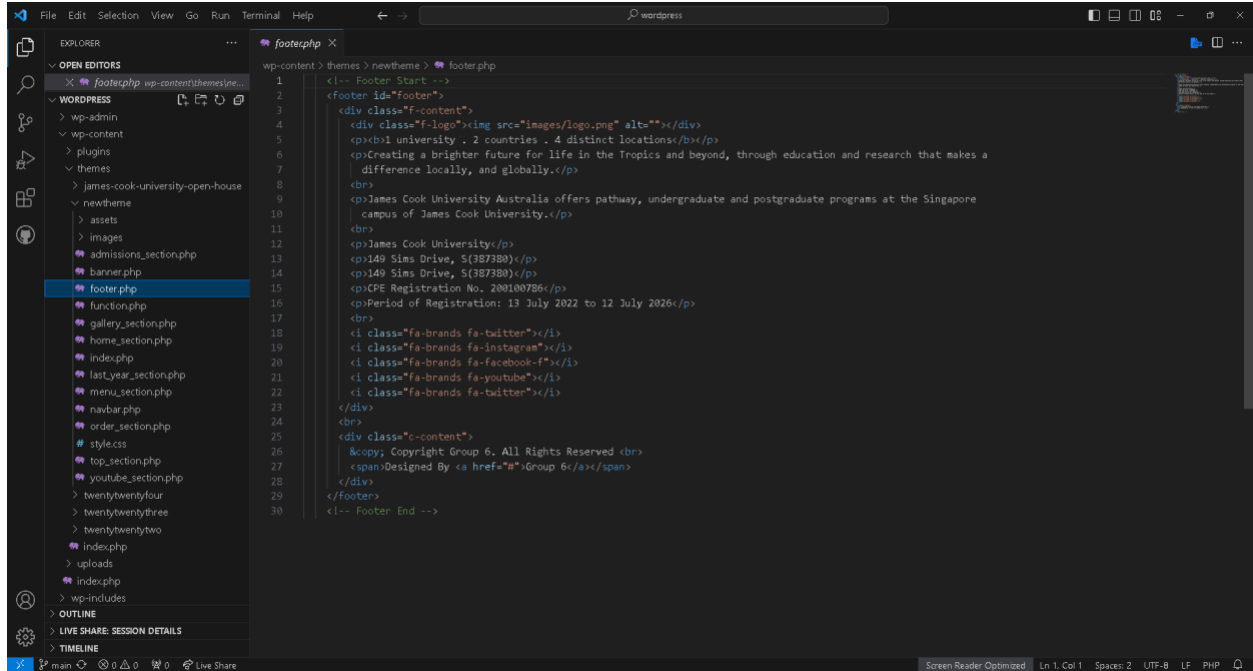

This php file is to replace Header.php from version 2. It has more navigation bar items, compared to header.php.

```
1 <!-- navbar.php -->
2
3 <nav class="navbar navbar-expand-sm" id="navbar">
4   <a href="index.html" class="navbar-brand" id="logo"></a>
5   <button class="navbar-toggler" type="button" data-bs-toggle="collapse" data-bs-target="#mynavbar">

## Footer.php

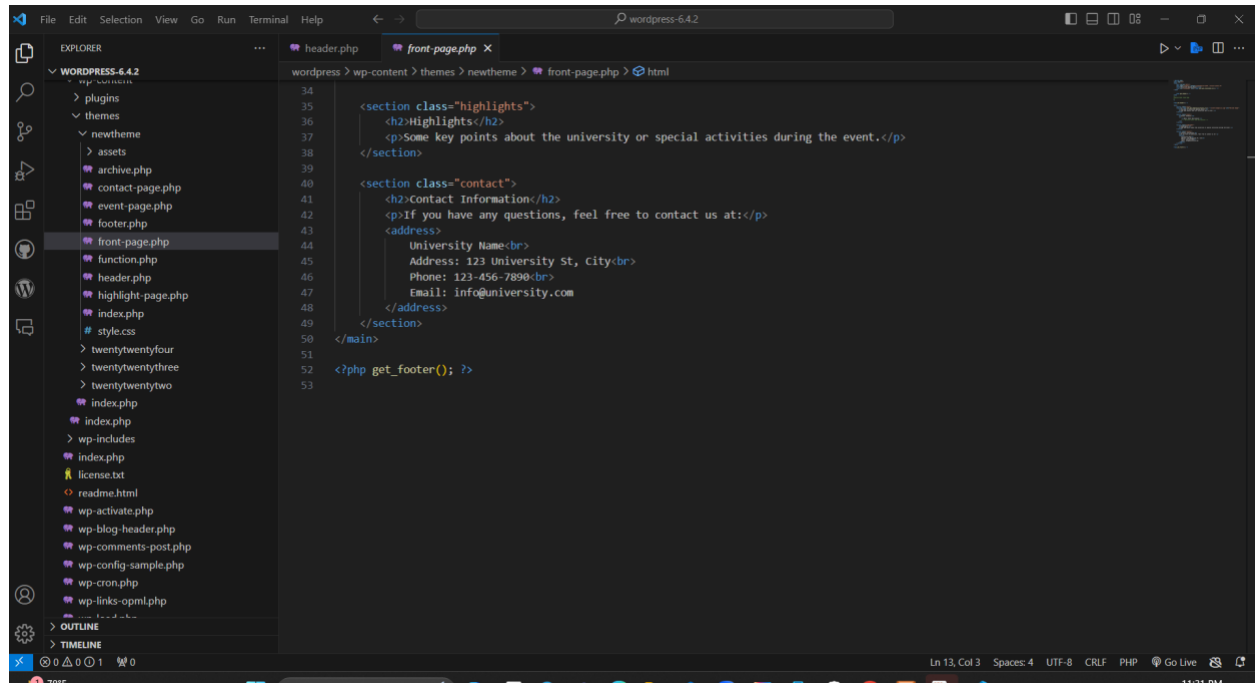

This php file is for footer part. It has more items, compared to previous footer.php file, such as location, phone number and address.

## Front-page.php

This php file shows the style of our website that will pop up first after opening localhost.

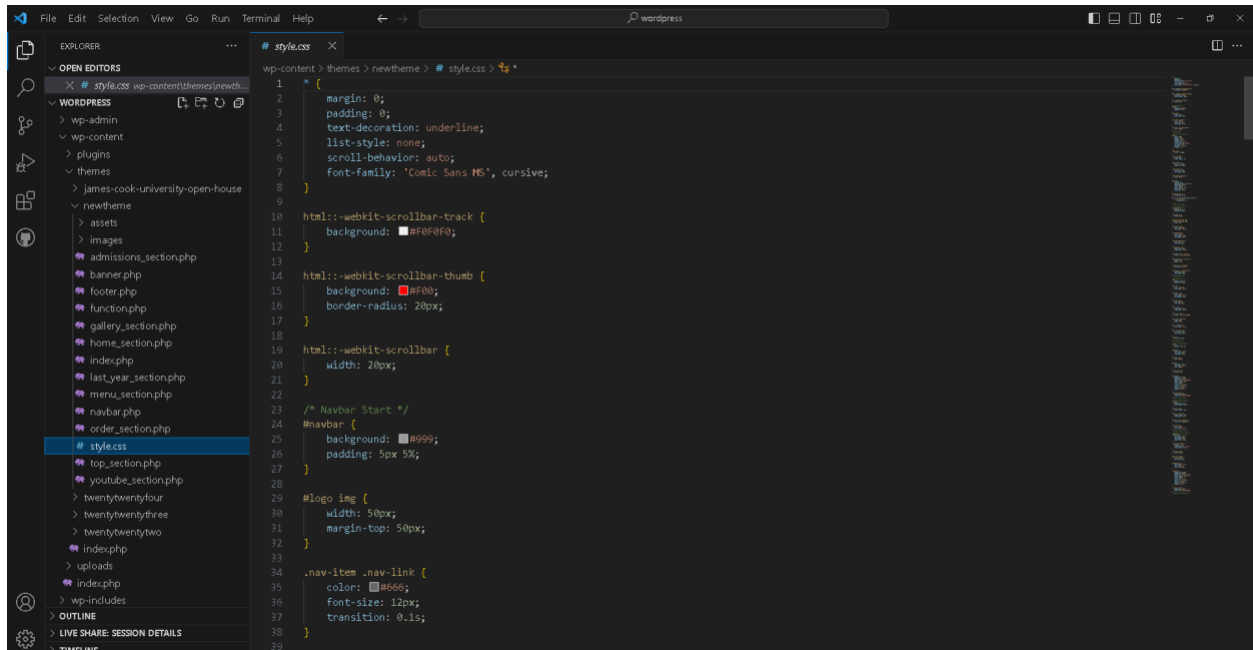

The screenshot shows a code editor with a dark theme. On the left, the 'EXPLORER' sidebar displays the file structure of a WordPress installation. The 'newtheme' directory is expanded, showing files like 'archive.php', 'contact-page.php', 'event-page.php', 'footer.php', 'front-page.php' (which is selected), 'function.php', 'header.php', 'highlight-page.php', 'index.php', and 'style.css'. The main editor area shows the code for 'front-page.php'. The code includes HTML sections for 'highlights' and 'contact' information, with placeholders for university details. The status bar at the bottom indicates 'Ln 13, Col 3', 'Spaces: 4', 'UTF-8', 'CRLF', 'PHP', and 'Go Live'.
